Skeletime Adapter Pad Kit

Skeletime Adapter Pad Kit

Skeletime Pad 54 Industry, with an optimal weight balance and to be applied to both electric and pneumatic sanders, thanks to its patented independent metal foil, flattens all surfaces without corrugations and recreates the corner profiles. Automatically offers the possibility of self-modeling on curves and at the same time adapting to flat surfaces, with tangible benefits, as primary is the reduction in manual working hours and less dust dispersed in the environment. Furthermore, adapting to the shapes, it does not leave gaps between the sanding pad and the surface allowing for total suction.

## **Benefits:**

1. Using fillers or primers, recreate the silhouette and edges of all shapes thanks to its self-modeling surface.
2. Reduction of the operator's manual hours by over 50%, with its higher calculated income.
3. By avoiding abrasive scratching on manual pads, it reduces working areas and is also suitable for spot repair of painting.
4. Having a metal support for the non-compliant abrasive and being harder than the processing materials (stucco, primer or paint) avoids the sanding undulations on the surfaces compared to conventional soft rubber sanding pads.
5. With the same particle size of the abrasive compared to conventional sanding pads, it makes the surface more homogeneous and less etched as it is cushioned sanding.
6. Greater yield of abrasive sheets for greater contact surface.
7. Avoiding manual processing reduces the amount of fine dust in the environment.

## **Models:**

- The **Hard** version with black tear-off adhesive has a tougher foil and is recommended for roughing operations with dedicated sanders, for the use of abrasive grains from P40 to P240. (Cod. ABX.0148.01)
- The **Medium** version with black tear-off adhesive has a softer foil and is recommended for finishing work with a dedicated sander, for the use of abrasive grains from P240 afterwards. (Code ABX.0148.02)

## **Dedicated accessories:**

- Cod. ABX.0000.03 Skeletime Kit Adapter Pad Universal adapters for sanders with non-standard attachments.
- Cod. ABX.0148.06 Skeletime D.148 Converter 1mm Insert to convert the hook and loop adhesive into a flat and smooth adhesive.
- Cod. ABX.0148.05 Interface Sponge 5mm Soft sponge insert to finish the smooth surface.
- Cod. ABX.0148.14 Skeletime D.148 Saver 1mm Insert to increase the useful life of Skeletime products when worn.
- Cod. ABX.0148.04 Insert Rubber 5mm Rubber insert for plastics processing and soften the support when necessary.
